fast orientation

The Opportunity: Security Engineer and Analyst

About you:

We are looking for skilled technologists who are also idea people, ready for the rigors and rewards of a startup. Viable candidates will have a degree in computer science or equivalent experience.

About us:

Fast Orientation allows organizations to explore and respond to IT events in real time, helping people make informed and timely decisions about security and enterprise operations with confidence. By promoting continuous awareness, our software helps companies improve operational health and enterprise security in a powerful and innovative way.

Founded in 2014, Fast Orientation was launched by a team of security industry veterans frustrated with the current state of enterprise security and deficiencies in existing security platforms. Building on the success of their past consulting and product experience, the team has built a product that promotes a strong operational security posture and permits immediate identification, response, and resolution of threats and failures—allowing companies to develop a natural intuition about their IT environment and reducing the need for unplanned, reactive, and expensive consulting engagements.

What we need:

We are looking for someone who has broad experience in software security, systems design, and application security testing and assessment. We expect that your infrastructure, protocol, and networking abilities are strong and well practiced. We need someone with the knowledge and skill to find vulnerabilities, and the ability to deliver clear and effective mitigation recommendations for our customers. We seek a security expert with a natural intuition about security, IT environments, and an instinct for identifying vulnerabilities and operational anomalies. We want an innovator who is driven to leverage his or her experience into durable security solutions for our users and their organizations.

Huge Pluses:

- Aptitude for application penetration testing and source code review
- Experience with software development, application and protocol reversing, and distributed systems
- Comfort documenting and communicating security assessments
- Acute awareness of attack vectors, threat tactics, and attack techniques, and the ability to respond to threats with strategic insight
- Compulsion for finding and fixing security issues in applications, implementations, and infrastructures

Are you ready for a fast paced startup?

- You are comfortable with a rapidly growing team
- You want to join a team of innovators with a passion for fresh solutions
- You are looking for a launching pad or accelerant for your career, not a resting place
- You want to work with positive people who enjoy and take pride in their work
- You want to help us make a product that our customers will enjoy using and that will make their lives easier

Are you ready to make an impact?

- You are a self-starter who isn't waiting for the next task to arrive and who can take ownership
- You produce superior work on schedule
- You quickly adapt and can recommend new technology and ideas where suitable

Are you ready to talk?
